What is Identity Check?

Who is really logged into your corporate Intranet and Internet site? A very good question and it is one that most companies cannot answer. Today security is becoming more and more important. A simple password may not be enough to secure your computer anymore. Identity Check was developed for all computer users to logon to different applications by using their fingerprint scan. When a user places his/her finger on the fingerprint scanner Identity Check matches his finger print and sends their username and password to the Intranet, or Internet application software.

SECURITY

No matter what kind of business you are in, you will likely have a need for the Identity Check. Banks, government agencies, educational institutes, and other corporations all benefit from being able to easily and accurately authenticate who is logging into their applications.

Do you think your employees are remembering their passwords for the company applications they are logging into? A large number of employees write down their passwords so that they will not forget them. This is far from secure and puts your company at a very high level of risks.

EFFICIENCY

Ever been at the office and had to log onto your computer with someone looking over your shoulder? Identity Check removes these risks by allowing your employees to be authenticated by their biometric profile. Any number of corporate applications can be authenticated using Identity Check, and it is controlled by your systems administrator. Giving you peace of mind, and allowing your employees to easily and securely log into their corporate, Intranet, and Internet applications.

When you ensure the identity of who is logging onto your network applications you not only manage company security, but protect your employees as well, ultimately saving you time and money.

WHO IS THE IDENTITY CHECK GREAT FOR?

BANKS OR HOSPITALS

GOVERNMENT AGENCIES

SCHOOLS

ADMINISTRATORS AND PROFESSIONALS THAT MANAGE A HIGH VOLUME OF DOCUMENTS

WHY USE IDENTITY CHECK FOR YOUR SECURE AREA LOGIN NEEDS?

QUICK AUTHENTICATION

NO EXPOSED PASSWORDS

MINIMIZE RISKS

SAVES TIME AND MONEY
